Subject: Re: Horus/Tek Juice - AI Chatbot

Hi Erdem.

Trust you are well.

Just bringing this back to your attention.

Based on our discussion, we have outlined two primary components for the project:

- **Public-Facing Website Chatbot:** A moderate-complexity bot utilizing Gemini APIs to handle general user interactions and pull information from your public website content.
- **Internal RAG-Based AI Assistant:** A secure, authenticated assistant for your primary user systems, allowing logged-in artists and users to retrieve contextual information from internal databases and company systems.

To move this forward, our immediate next step is to align on the technical approach for data access. We want to confirm whether your team prefers to grant us controlled database access, have us build the required APIs (estimated at 2–3 weeks), or have your internal development team expose the necessary endpoints.

Proposed Next Steps & Technical Discovery

I would like to suggest a follow-up technical discovery session. The goals of this meeting will be to:

1. **Define the Scope of Work:** Review your existing system architecture, database structures, and authentication mechanisms.
2. **Establish Success Criteria:** Agree on the target AI response behaviour, performance benchmarks, and key delivery milestones.

To ensure we get the most out of this session, please include your lead developer and team member that manages or deeply your database infrastructure. Their input on proposed APIs and data structures will be critical to locking down the final timeline and resource requirements.

Please let me know your availability this week for this session.

Hi Robert,

I'm available between 2pm-3pm if that works for you as well.

Best,
Erdem

Hi Robert,

Thanks for following up.

The APIs we discussed aren't built yet. They'll be developed as part of the Nambi chatbot integration itself, so we don't have existing docs or endpoints to share at this stage.

Given that, I think it makes more sense to move straight to the technical deep-dive with your team. That way we can align on what endpoints are needed, define the data contracts together, and plan the build accordingly.

Would that work on your end? Happy to find a time that suits in next week.

Best,
Erdem

Hi Erdem.

Just reaching out to you as a follow-up to our call last week. Please share API docs, microservice endpoints, and authentication details; following that I will schedule a technical deep-dive.

Regards,
Robert.

Hi all,

Thanks for joining today and for your feedback on the Everything Uganda Chatbot demo.

Next steps:

- Erdem to share API docs, microservice endpoints, and authentication details within five days.
- Robert to connect Horus technical contact with TekJuice lead for a technical deep-dive; TekJuice to propose staged implementation plan, timeline, and cost estimate.
- Erdem and I to compile technical questions and define success criteria.

Let me know if you have any questions.

Best,

Nick
